FOR IMMEDIATE RELEASE

BAC Earns ISO 9001:2015 and AS9100D Certification for Manufacturing and Logistics Excellence

Setting the Standard for Quality, Efficiency, and Trusted Business Partnerships

Rockledge, FL | BAC proudly announces its successful achievement of the AS9100 certification in Manufacturing and Logistics operations. AS9100 is the internationally recognized standard for quality management systems in the aerospace, defense, and aviation industries, incorporating all elements of ISO 9001 and adding critical requirements for product safety, configuration management, risk mitigation, and supply chain integrity.

This internationally recognized certification affirms BAC's commitment to robust quality management systems and reinforces its reputation as a high-performing federal contractor and economic driver under the AbilityOne® Program.

The certification process involved a rigorous, multi-phase evaluation conducted by an independent third-party auditor. BAC underwent a comprehensive internal review of all systems, documentation, and operational workflows, followed by an external assessment to ensure full alignment with ISO 9001:2015 and AS9100 standards. The organization's commitment to continuous improvement, customer satisfaction, and risk-analysis based thinking played a key role in achieving this globally recognized quality benchmark.

"AS9100 certification marks our entry into the highest tier of aerospace and defense manufacturing. It's more than a quality stamp, it's proof that we're built for precision, ready for complexity, and trusted to deliver." said **Crystal Fuller, Director of Manufacturing and Logistics**. "This achievement validates our commitment to the rigorous standards our industry demands and reinforces our role as a dependable partner capable of supporting critical missions with confidence."

Key Benefits of AS9100 Certification:

- Strengthened supply chain control and product traceability
- Increased readiness for defense and aerospace contracts
- Enhanced quality assurance aligned with international aerospace standards
- Demonstrated ability to meet high-reliability, zero-defect expectations

While the certification was awarded specifically to BAC's Manufacturing and Logistics operations, its impact extends across all business lines, from Facilities Management and Business IT to support our contract performance while we aim to employ veterans and individuals with disabilities. AS9100 reinforces BAC's integrated approach to performance, mission delivery, and accountability. It proves that nonprofit agencies like BAC, especially under the AbilityOne® Program, are not only capable of meeting rigorous quality standards but are also vital contributors to warfighter readiness, economic growth, and America's workforce infrastructure.

"ISO and AS9100 aren't just about manufacturing, they enhance our entire ecosystem, including IT and Process Improvement." stated **James Brown, Director of Business IT Services**, "They create structures that are clear, unambiguous, and elevate our security posture to new heights. These certifications enhance our already high standards and serve to bolster our position as a trusted business partner across many lines of business and various sectors."

The certification is effective immediately, positioning BAC as a leader in quality management. For more information on how BAC's AS9100-certified capabilities can support your business or agency, visit www.bacemploy.com or contact our team directly.
